Education

Integrated M.Tech (B.Tech + M.Tech) in Computer Science & Engineering	2022–2027
Vellore Institute of Technology	CGPA - 8.19/10
12th Standard Excellence Higher Secondary School, Ashta	Percentage - 83.2% 2020–2022
10th Standard Sacred Heart Higher Secondary School, Ashta	Percentage - 96% 2019–2020

Technical Skills

- **Languages:** Python, SQL
- **Libraries & Frameworks:** Pandas, NumPy, Matplotlib, Scikit-learn
- **Developer Tools:** Git, GitHub, VS Code, Jupyter Notebook
- **BI & Visualization:** Power BI, Excel, Streamlit, Matplotlib
- **Databases:** PostgreSQL, SQL
- **CS Fundamentals:** Data Structures and Algorithms, Object-Oriented programming, Database Management System

Experience

LeMiCi IQ Private Limited	(Jul, 2026 – Aug 2026)
<i>Data Analytics Intern</i>	<i>Bangalore, India (Remote)</i>
• Completed 2 data analytics assignments involving data extraction, cleaning, preprocessing, analysis, and visualization. • Extracted and transformed data from PDF/research datasets using Excel and Python for analysis. • Developed interactive Power BI dashboards to present key trends, insights, and business-relevant findings. • Collaborated with team members to understand requirements, analyze datasets, and deliver assigned analytics tasks.	

Projects

TalentScout AI — RAG-Driven Resume Screener	GitHub
Python · FastAPI · LangChain · ChromaDB · Google Gemini · Streamlit · PyPDF · Git	
• Built an end-to-end AI resume screening system using RAG architecture, enabling instant natural language queries and significantly reducing manual resume review time. • Implemented a vector embedding pipeline using LangChain and ChromaDB to semantically index resume content with Google’s embedding-001 model. • Developed a FastAPI REST API backend with PDF upload, validation, and structured JSON responses — tested via Swagger UI with comprehensive error handling. • Created an interactive Streamlit frontend with real-time API integration, supporting recruiter queries with AI-generated answers and evidence citations.	

Organ Donation Management System

Python · SQL · Database Management · Software testing
• Developed a centralized system to manage organ donors, recipients, organ availability, and donation records. • Implemented database-driven functionality for donor registration, recipient management, organ matching, and donation tracking. • Used SQL-based data management to efficiently store, retrieve, and update donor and recipient information. • Designed the system to streamline the organ allocation process and maintain organized donation records.

Customer Shopping Behaviour Analysis

Python · SQL · Power BI · Numpy · Matplotlib	GitHub
• Analyzed 3,900+ customer transaction records using Python and Pandas to clean data and identify purchasing patterns. • Developed SQL analytical queries using filtering, grouping, and aggregations to evaluate revenue, sales KPIs, and customer behaviour across multiple dimensions. • Built an interactive Power BI dashboard with 10+ KPIs and visualizations to analyze revenue, customer segments, and subscription trends.	

Certificates & Achievements

- Quantum Data Analytics Job Simulation – Forage
- SQL Advanced - HackerRank
- Applied Mchine Learning in python - Courseera

Leadership & Volunteering

- **NSS Club:** Participated in social awareness drives, community service activities, and event management initiatives impacting students across campus.
- **Kanchan Education and Welfare Society:** Contributed to educational and social welfare programs while strengthening teamwork, communication, and organizational skills.
